NEW!!! PTi Web Site

PTi has entered the electronics age by publishing its own web site. The site is loaded with information that you will need for any job using PTi products. Visit our site at www.preventiontechnologiesinc.com and you will find the solutions we have for many difficult containment problems.

When you enter the site, you can navigate either with the tool bar or by clicking on any photo or icon. Many of the sections of this newsletter will be taken directly from the site. Enjoy!!!

New Product!!! PTi Twin Tube Paste and PTi Twin Tube Self-Leveling.

PTi has developed and released for sale two great new products: PTi Twin Tube Paste and PTi Twin Tube Self-Leveling. These products were designed for easy use and application with minimum loss. Both Twin Tube products are applied using either a manual dual cartridge gun (shown at right) or an air assist dual cartridge gun. The product is mixed via a static mixing

nozzle that is easily discarded and replaced with a new nozzle if only a partial tube remains.

PTi Twin Tube Paste and PTi Twin Tube Self-Leveling have the same great properties as our primary product, PTi Paste product.

A GREAT application of PTi Twin Tube Paste is the caulking and sealing around dispenser islands and concrete joints. This product works very well as it has outstanding fuel resistance, super adhesion to concrete, remains flexible *and* has very good UV resistance. Try it! Another convenient application is for touchup repairs that require just a bit of product. Rather than mixing a full bucket of the conventional PTi Paste, use a handful of the PTi Twin Tube Paste and avoid the mess and waste.

Case Histories: Development of Prevention Technologies

Prevention Technologies, Inc., has been in business for over three years. Our technology, which is licensed from a major oil company, is almost ten years old. Our products in various forms have been in use for over 50 years!!!

Our Form-in-Place technologies were developed to provide a low cost alternative for existing service stations to reduce their environmental remediation cost. By allowing a station to install under dispenser containment and upgrade their Below Grade fills to At Grade status without shutting down, an owner/operator can now enjoy the peace of mind of improved protection without the shut down. Since 1996, several thousand stations have been upgraded using the Prevention Technologies system!

Customer Base:

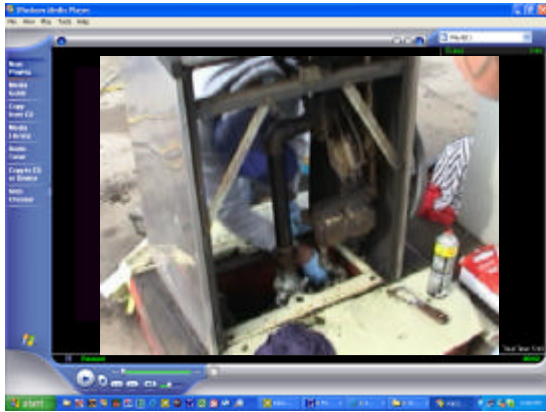

It is not our policy to disclose our customers without their permissions, so we won't. PTi has been specified

as the product of choice by three major oil companies and one major retail marketer.

We have over 120 contractors and customers throughout the USA who use our products.

Training Aids are Now Available:

PTi has now created easy to use training aids that will make your job easier and insure that the job gets done correctly. The follow training guides are available:

For PTi Boot Repair users only:

- Tools Required
- Mixing the Paste
- Boot Repair

For PTi Twin Tube products only:

- PTi Twin Tube Paste Application

And for PTi Form-in-Place systems which requires the user to sign a confidentiality agreement not to disclose our proprietary technology:

- PTi Form-in-Place Dispenser Pan

Help Us Spread the Word:

Please share this flyer (and CD) with your company management and tell them how they can save money by using our products. Also share this with your customers. They can benefit immediately as well as longer term. Using PTi products to repair failures of existing sump and pan penetrations will result in substantial reduction in water infiltration and ultimately prevent motor fuel releases to the soil. PTi will assist you on this customer cost saving presentation.
